# Git Workflow

**Start**

*Important!*

Open the project in your text editor

Type 'git pull' into the terminal to pull down the most recent version of the project to your local machine

Create new feature branch using 'git checkout -b <feature-branch-name>'

Write your code in this feature branch

Add, commit, and push your code in git

Create a pull request in GitHub to merge your code to the main branch

Verify your code on the main branch looks correct and/or resolve any merge conflicts.

**Finish**
